

MAKHZONE

"We don't guess the best location — we calculate it."

Problem

- fast delivery companies depend heavily on being close to their customers to achieve quick delivery times. However, choosing the wrong location for a dark store can result in delayed deliveries, increased operational costs, and poor customer satisfaction.
- The challenge lies in the complexity of the decision. Factors like high rent, traffic congestion, uneven population distribution, and existing competitors make it difficult to identify the best location. Most companies still rely on assumptions rather than data-driven decisions, which limits their efficiency.

Solution

MAK-ZONE is an **AI + GIS** platform that determines the best warehouse locations.

What we do:

Analyze:

- Traffic data
- Population density
- Demand patterns

Use AI to:

- Recommend optimal locations
- Reduce delivery time
- Minimize cost

Value:

- Data-driven decisions instead of guessing
- Faster delivery
- Lower operational cost

Demo

Market Opportunity

Fast-growing delivery & logistics market

Increasing demand for:

- Faster delivery
- Better coverage
- Smarter location decisions

Market gap:

- Lack of AI-based decision tools

Target Market:

- Q-commerce companies
- E-commerce platforms
- Logistics providers

Market Size:

- 20 enterprise clients (Year 3 target)
- Revenue potential: **48MEGP/year**

Go-To-Market Strategy

Approach:

- Direct B2B enterprise sales

Steps:

1. Lead generation (targeting logistics & Q-commerce decision makers)
2. Discovery session (understanding delivery pain points)
3. AI-based location demo
4. ROI-based proposal
5. Contract

Channels:

- Direct sales
- Partnerships with logistics companies
- Demo presentations & pilot projects

Focus:

“Consultative selling powered by AI insights, not mass marketing”

Business Model

MAKHZONE

BUSINESS MODEL CANVAS

Financials

Revenue:

- Year 1: 4.8MEGP
- Year 2: 29.2MEGP
- Year 3: 68.3MEGP

Profitability:

- Break-even at ~4 clients
- Strong profitability starting Year 2

Cost Structure:

Initial Setup:

- Avg Warehouse: 7MEGP
- Equipment (laptops, printers, etc.) : 1.5 M

Monthly Costs:

- AI Engineers: up to 80K
- Sales & Operations team: 70K
- Customer support & security 100K

The Ask

We are seeking 140 million EGP in funding.

Use of funds:

- Warehouse acquisition (13 locations)
- Warehouse setup & equipment
- Headquarters office setup
- IT systems and infrastructure.
- Working capital & operational reserve

Why invest?

- A network of 13 strategic dark stores were established in Cairo
- Asset-backed logistics infrastructure
- B2B quick commerce market is rapidly expanding.
- Scalable expansion model
- Excellent long term growth prospects

THANK YOU
